

Robust and configurable industrial rider scrubber

Scrubbing for large areas

B 250 R

Powerhouse on three wheels.

The B 250 R scrubber is the right alternative for hard surface cleaning of large facilities. The robust tubular steel frame meets even the toughest operational demands. Large batteries and a large water tank guarantee long work intervals. Thanks to the single-button control and the colorful control elements, the machine is especially easy to use.

1 Very small turning radius

The short wheelbase and narrow body ensure high maneuverability and large area coverage. So even narrow areas can be cleaned efficiently.

- Very small turning radius
- High maneuverability
- Good area coverage

2 Filling made easy

With the automatic filling system, a hose is simply connected with a conventional hose coupling. The water flow stops automatically as soon as the tank is full. This means that other tasks can be carried out while the tank is filled and waiting time is reduced. For the hose connection, a conventional quick coupling with a back flow prevention device is recommended.

3 Extra large working width

The roller brush is available in two working widths providing greater area performance. A deflector protects the protruding brush head against damage.

- Extra large working width of up to 47"
- High area performance
- Very robust thanks to extremely stable deflector
- Pre-sweeping can usually be eliminated due to the side brushes and cylindrical technology

4 Even longer run time – eco!efficiency

In ecolefficiency mode, the vacuum power, the water flow and the roller speed are reduced with a single click. This extends the work interval and the effective run time of the machine to up to 7 hours.

- Reduced water consumption
- Reduced power consumption
- Extended run time

Fully individual configuration of the B 250 R machine.

Configure the very personal B 250 R. You can create a very efficient machine that is perfectly tailored to your requirements. You can choose from a compact scrubber or an efficient sweeper vacuum/scrubber. There are two different working widths available and a wide variety of useful special equipment.

Roller heads

Roller heads (R) have advantages for cleaning structured floors and in deep grooves.

Working lights

For dark areas, such as in parking lots or in logistics areas, the work lights improve vision and make the machine easier to see.

Cleaning agent dosing unit

With the DOSE cleaning agent dosing unit, the cleaning agent is added to the fresh water when required. The dosage can be set from 0 to 3%.

Special equipment

Available are other additional options, such as a flashing light, recycling, spray suction, a canopy or side brushes, which make the machine even more efficient.

Individual configuration of the B 250 R.

Choose from two different brush heads for the B 250 R scrubber drier. You can also select the squeegee that is right for you and many other different configurations.
